_	- ChatGPT ~			
	Data Handling	Light (relies on integrations)	Heavy (core functionality)	<u> </u>
	Typical Pairing	Used <b>with</b> LlamaIndex for data	Used <b>with</b> LangChain for orchestration	

## 🧠 Analogy:

- LangChain is the "brain and nervous system" that decides what to do and when.
- **LlamaIndex** is the **"memory system"**, enabling access to **knowledge/data** from structured/unstructured sources.

## When to Use What:

- Use **LlamaIndex** when:
  - You need to connect LLMs to documents, PDFs, websites, or databases.
  - You care about indexing, retrieval strategies, and chunking data.
- Use **LangChain** when:
  - You want to build workflows with multiple steps (e.g., call API, then run LLM).
  - You need agents or tools.
  - You want memory, prompt templates, or dynamic chains.
